Setting the Run Order for Multiple Calculated Fields

If you are working with an application, a questionnaire, or a sub-form that contains multiple calculated fields and the formula for 1 calculated field is dependent on the result of another calculated field, you must specify the order in which you want to compute the calculated fields.

Note: When you add a new calculated field to an application, a questionnaire, or a sub-form, it displays at the bottom of the list in the Field Calculation Order listing.

Set the run order for multiple calculated fields

1. From the menu, click  > Application Builder > Applications.

2. Click the Calculations tab.

3. Go to the Field Calculation Order section.

4. Reorder the fields within the Fields section to the calculation order you want.

5. Click Save.
